Vision & Mission

Vision

To be the most authentic official source for data and policy analysis on the hydrocarbon sector in the country.

Mission

1. To monitor and analyze developments in the domestic oil and gas sector.
2. To undertake analysis of domestic and International energy markets.
3. To develop a cooperative framework for exchange of information and conduct of studies with other countries and international organizations in the energy sector.
4. To strengthen the existing data system in PPAC by adopting the latest techniques and best practices.
5. To render effective assistance and advice to the Ministry of Petroleum & Natural Gas in the discharge of

Objective

1. To monitor and analyze trends in prices of crude oil, petroleum products and natural gas and their Impact on the companies and consumers and prepare appropriate technical inputs for policy making, transportation and distribution of petroleum products.
3. To collect compile and disseminate data on the domestic Oil and gas sector in a continuous manner and maintain the data bank.
4. To ensure quality of data in terms of prescribed parameters such as accuracy, completeness and timeliness.
5. To disseminate periodic reports on various aspects of oil and gas sector.
6. To ensure effective administration of the subsidy schemes notified by the Government.

Notes:

Data is as on end of 2020.

Total proved reserves of oil - Generally taken to be those quantities that geological and engineering information indicates with reasonable certainty can be recovered in the future from known reservoirs under existing economic and operating conditions. The data series for total proved oil reserves does not necessarily meet the definitions, guidelines and practices used for determining proved reserves at company level, for instance as published by the US Securities and Exchange Commission, nor does it necessarily represent the EI's view of proved reserves by country.

Reserves-to-production (R/P) ratio - If the reserves remaining at the end of any year are divided by the production in that year, the result is the length of time that those remaining reserves would last if production were to continue at that rate.

Canadian oil sands 'under active development' are an official estimate. Venezuelan Orinoco Belt reserves are based on the OPEC Secretariat and government announcements. Reserves and R/P ratio for Canada includes Canadian oil sands. Reserves and R/P ratio for Venezuela includes the Orinoco Belt. Saudi Arabia's oil reserves include NGLs from 2017. Reserves include gas condensate and natural gas liquids (NGLs) as well as crude oil. Shares of total and R/P ratios are calculated using thousand million barrels figures.

*Includes crude oil, shale oil, oil sands, condensates (lease condensate or gas condensates that require further refining) and NGLs (natural gas liquids - ethane, LPG and naphtha separated from the production of natural gas).

Excludes liquid fuels from other sources such as biofuels and synthetic derivatives of coal and natural gas. This also excludes liquid fuel adjustment factors such as refinery processing gain. Excludes oil shales/kerogen extracted in solid form.

Excludes Estonia, Latvia and Lithuania prior to 1985 and Croatia and Slovenia prior to 1990.

Inland demand plus international aviation and marine bunkers and refinery fuel and loss. Consumption of biogasoline (such as ethanol) and biodiesel are excluded while derivatives of coal and natural gas are included.

Excludes Estonia, Latvia and Lithuania prior to 1985 and Croatia and Slovenia prior to 1990.

Notes: Differences between these world consumption figures and world production statistics are accounted for by stock changes, consumption of non-petroleum additives and substitute fuels and unavoidable disparities in the definition, measurement or conversion of oil supply and demand data.

Policy	Details				
Policy Guidelines for Exploration & exploitation of Shale gas and oil	☐ Shale gas and oil exploration policy was announced in October, 2013. ONGC and OIL India Ltd have been allotted 50 and 6 blocks respectively for assessment under Phase-I. ONGC identified 50 blocks in 4 basins and OIL identified 6 blocks in 2 basins in Phase-I.				
	☐ Under Hydrocarbon Exploration and Licensing Policy (HELP), 2016, all types of hydrocarbon resources, both Conventional and Unconventional including CBM, shale gas/oil, tight gas and gas hydrates were allowed to be explored and exploited.				
	☐ In August 2018, the Government of India notified a Policy framework for Exploration and exploitation of Unconventional hydrocarbons in existing acreages under existing Production Sharing Contracts (PSC), Coal Bed Methane (CBM) Contracts and Nomination fields.

Chapter -3

NATURAL GAS

Chapter Highlights

Natural Gas

1. Domestic Natural Gas production:

- ❑ The domestic Gross Production of natural gas for the April 2025 - September 2025 period has shown decrease of ~3.2% when compared from April 2024 - Sept 2024 i.e. decrease of ~575 MMSCM from 18160 MMSCM in April 2024 - September 2024 to 17585 MMSCM in April 2025 - September 2025 (P).
- ❑ The six-month miniscule decrease is mainly due to decrease in production of natural gas from PSC/JVs fields (~ 5.6%) and ONGC from nomination fields (~2.0%). Whereas natural gas production from OIL nomination fields have shown an increase of ~1.0%.

2. LNG import*:

- ❑ The total six monthly LNG Imports in volume terms decreased by 11.1% i.e. to 16906 MMSCM in April 2025 - September 2025 from 19008 MMSCM in April 2024 - Sept 2024. In value terms, the LNG Imports in US \$ terms, have shown a decrease of ~10.89% i.e. to US \$ 6808 Million in the period April 2025 - September 2025 (P) from US \$ 7640 Million in the period April 2024 - Sept 2024.

(*Source: DGCIS. Aug'25 - Sept'25 LNG Import data is prorated. The numbers may vary on receipt of latest DGCIS data)

3. LNG terminals capacity utilization:

- ❑ Utilization of LNG terminal capacity of 52.7 MMTA in the period April 2025 - August 2025 ranged from ~4.8% (Chhara Terminal) to ~91.8% (Dahej LNG terminal).

4. CGD Networks:

- ❑ In terms of infrastructure, as on 31.08.2025, there are 8340 CNG stations and 15694634 PNG connections (DPNG- 15627037 Nos., Commercial- 46633 Nos., Industrial- 20964 Nos.) (Source: PNGRB)
- ❑ CNG stations has increased by 3.38% from 8067 CNG stations as on 31.03.2025 and PNG Connections have increased aggregatively by 3.89% from 15107305 Connections as on 31.03.2025

5. Consumption:

- ❑ From availability perspective: Total Six monthly (April 2025 - September 2025) Consumption (including internal use i.e Net Production + LNG import) stood at 34265 MMSCM showing a decrease of ~7.1% compared to previous corresponding six-month period (April 2024-September 2024) with 36883 MMSCM.
- ❑ Sectoral Consumption: Major Sectors for NG consumption during April 2025 - September 2025 are Fertilizer - 28%, CGD - 24%, Power - 13%, Refinery - 8% and Petrochem - 6%.

REFINING & PRODUCTION

Chapter Highlights

Refining & Production

As per April 2025 the Nameplate Refining Capacity of India is 258.1 MMTPA. India stands as the second-largest refiner in Asia and the fourth largest globally. The country is equipped with 22 operational Refineries, with private companies holding approximately 34.3% of the total refining capacity.

Cauvery Basin Refinery (CBR) – Nagapattinam is under capacity augmentation from 1 MMTPA to 9 MMTPA. The construction of HPCL Rajasthan Refinery Ltd. (HRRL), a joint venture between Hindustan Petroleum Corporation Limited (HPCL) and the Government of Rajasthan (GoR), is underway. The equity participation in the venture is 74% by HPCL and 26% by the Government of Rajasthan, and it has a capacity of 9.0 million metric tons per annum (MMTPA). Numaligarh Refinery is under capacity augmentation from 3 MMTPA to 9 MMTPA.

The crude Oil processing during FY 2025-26 (H1) was 134 MMT, during this period the average capacity utilization was 104 %.

The total production of Petroleum products during FY 2025-26 (H1) was 139.6 MMT out of which 137.9 MMT was produced from the processing of Crude Oil and Other Inputs in the Refineries. The Share of Lighter Distillates like LPG, Naphtha, MS etc was 36% out of the Total Production from refineries. Share of Middle Distillate like SKO, ATF, HSD etc was 51.2% and Heavy Ends like Petcoke, FO, LSHS, Bitumin etc was 12.7 % of the total production from refineries. Among the Total domestic production of petroleum products the share of HSD was 41.5 % followed by MS 17.0%, Naphtha 6.5%, ATF 6.2%,Petcoke 5.3% and LPG 4.5%.

Export & Import

Crude Import

The crude oil imports during FY 2025-26 (H1) registered a 0.3% increase compared to the previous year, aligning with the concurrent rise in the consumption of petroleum products.

Product Exports

During FY 2025-26 (H1), the exports of Petroleum, Oil, and Lubricants (POL) products saw an increase of 0.7% compared to the previous year. The rise in POL product exports in FY 2025-26 (H1) was primarily attributed due to an increase in the export of motor-spirit (MS), naphtha and high-speed diesel (HSD) etc. In value terms, exports during FY 2025-26 (H1) dropped from 22.1 billion US dollars to 19.9 billion US dollars, marking a 10.1% decrease compared to FY 2024-25 (H1). High-speed diesel (HSD), motor spirit (MS), and aviation turbine fuel (ATF) emerged as the top three products in the export basket of petroleum products during FY 2025-26 (H1), with shares of 43.3%, 25.8%, and 11.9%, respectively.

Product Imports

During FY 2025-26 (H1), imports of petroleum products experienced a notable increase of 2.3% compared to the previous year. The rise in imports during this period was primarily driven by an increase in the import of liquified petroleum gas (LPG) and petcoke etc. Within the import basket of petroleum products in FY 2025-26 (H1), Liquefied Petroleum Gas (LPG) held the highest share at 42.7%, followed by petcoke at 25.6%, and fuel oil at 11.5%. The entire quantity of petcoke was imported by private importers.

Note:

*Import does not include LNG imports

**Other imports include Paraffin Wax, Petroleum Jelly, Aviation Gas, MTBE, Reformate etc.

***Other exports include VGO, Benzene, Hexane, MTO, Sulphur etc.

"Others" in exports include RIL-SEZ exports of "Others" with unspecified heavy ends.

Crude oil imports increased by 6.1% and 0.3% during September 2025 and April-September FY 2024-25 respectively as compared to the corresponding period of the previous year

Imports made due to deficit in production viz. LPG and Lubes/LOBS accounted for 48.8% share of total POL products import during FY 2025-26 H1 as compared to 44.9% during FY 2024-25 H1.

Imports of naphtha and FO were done for commercial and technical considerations and accounted for 13.4% share of total POL products import during FY 2025-26 H1 as compared to 19.0% during FY 2024-25 H1.

Increase of 0.7% was recorded in POL products export during FY 2025-26 H1 as compared to during FY 2024-25 H1 mainly due to increase in exports of motor-spirit (MS), naphtha and high-speed diesel (HSD) etc.

Major Pipeline in India

Chapter Highlights

Major Pipelines in India

- Pipelines play a crucial role in maintaining the supply chain for crude oil, petroleum products, and gas in the country. Onshore cross-country pipelines are buried underground at a depth of approximately 1.5 meters within a corridor spanning about 18 meters, operating at elevated pressures. As of September 30, 2025, the total length of the crude oil pipeline network in India is 10,445 kilometers, boasting a capacity of 153.1 million metric tons per annum (MMTPA). During FY 2025-26 H1, the utilization of crude oil pipelines stands at 64.5%.
- Product pipelines, inclusive of LPG, form a comprehensive network spanning 24,346 kilometers with a capacity of 151.8 MMTPA. During FY 2025-26 (H1), the utilization of product pipelines reached 68.5%.
- **Natural Gas Pipeline infrastructure-** is an economical and safe mode of transporting natural gas by connecting gas sources to gas consuming markets. Gas pipeline grid determines the structure of the gas market and its development. Therefore, an interconnected National Gas Grid has been envisaged to ensure the adequate availability and equitable distribution of natural gas in all parts of the country. As on 30th June 2025, there is about 24,016 km long Natural Gas pipeline network which is operational in the country. In order to make available natural gas across the country, it has been envisaged to develop additional about 9,187 km pipelines (excluding Tie-in connectivity, dedicated & STPL) to complete the National Gas Grid and same are at various stages of development. This would ensure easy availability of natural gas across all regions and potentially help to achieve uniform economic and social progress.

Notes:

Pipeline utilisation is calculated using formula = (Throughput in MMT * 100) / (Annual capacity in MMTPA*0.5)

BPCL

1)Kota-Jobner Pipeline is a branch pipeline of Mumbai Manmad Bijwasan pipeline with annual capacity of 1.7 MMTPA.Throughput of this pipeline is included in MMBPL & BKPL pipelines.

2)Petronet CCK was merged with BPCL w.e.f 01.06.2018.

HPCL

(1)Throughput of Mundra-Delhi Pipeline is including throughputs of branchlines viz. Awa Salawas Pipeline, Palanpur Vadodara Pipeline and Barwala Hissar pipeline.

(2)Throughput of Ramanmandi Bahadurgarh Pipeline is including throughput of branchlines viz. Bahadurgarh-Tikrikalan Pipeline & Rewari-Kanpur Pipeline.

(3)Lube Oil Pipeline and ATF Pipeline from Mumbai Refinery to Mazgaon Terminal and Mumbai Airport are Speciality Product Pipelines.

(4)Throughput of UC SPL includes both HPCL & BPCL volumes.

(5)Throughput of Vizag-Vijaywada-Secunderabad pipeline includes throughput of branchline Vijaywada Dharmapuri (VDPL) Pipeline

(6)Throughput of Mangalore-Hassan-Mysore-Bangalore pipeline includes throughput of branchline Hassan-Chertalapalli LPG Pipeline

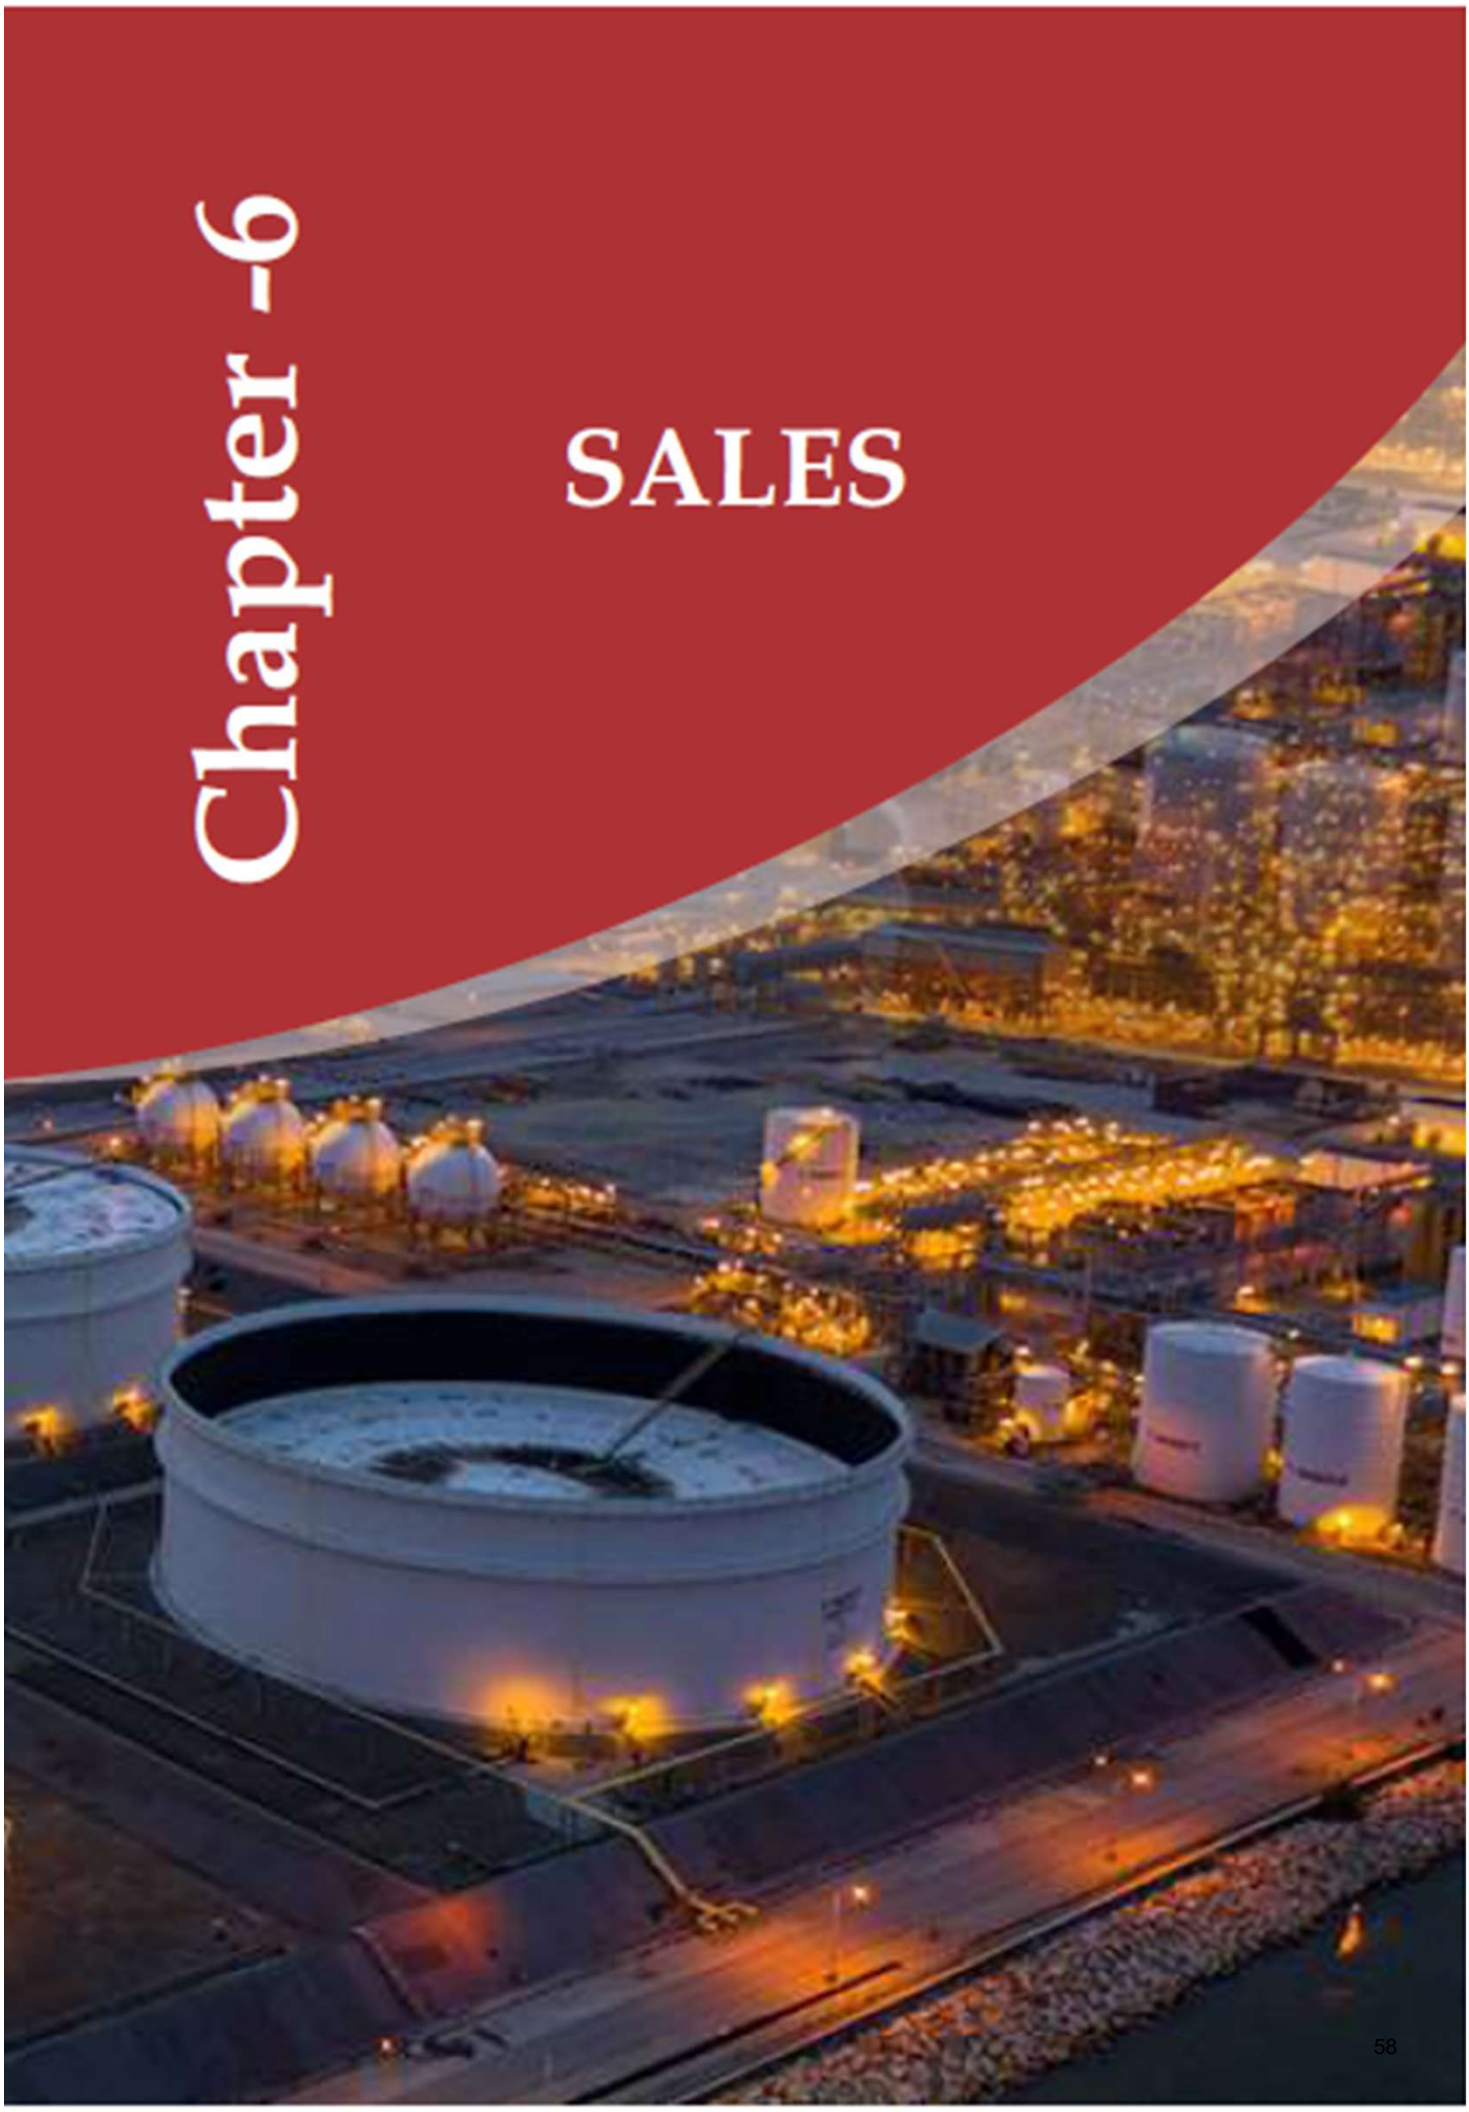

(7)Barmer Palanpur Pipeline was commissioned on 26.09.2025.

Chapter Highlights

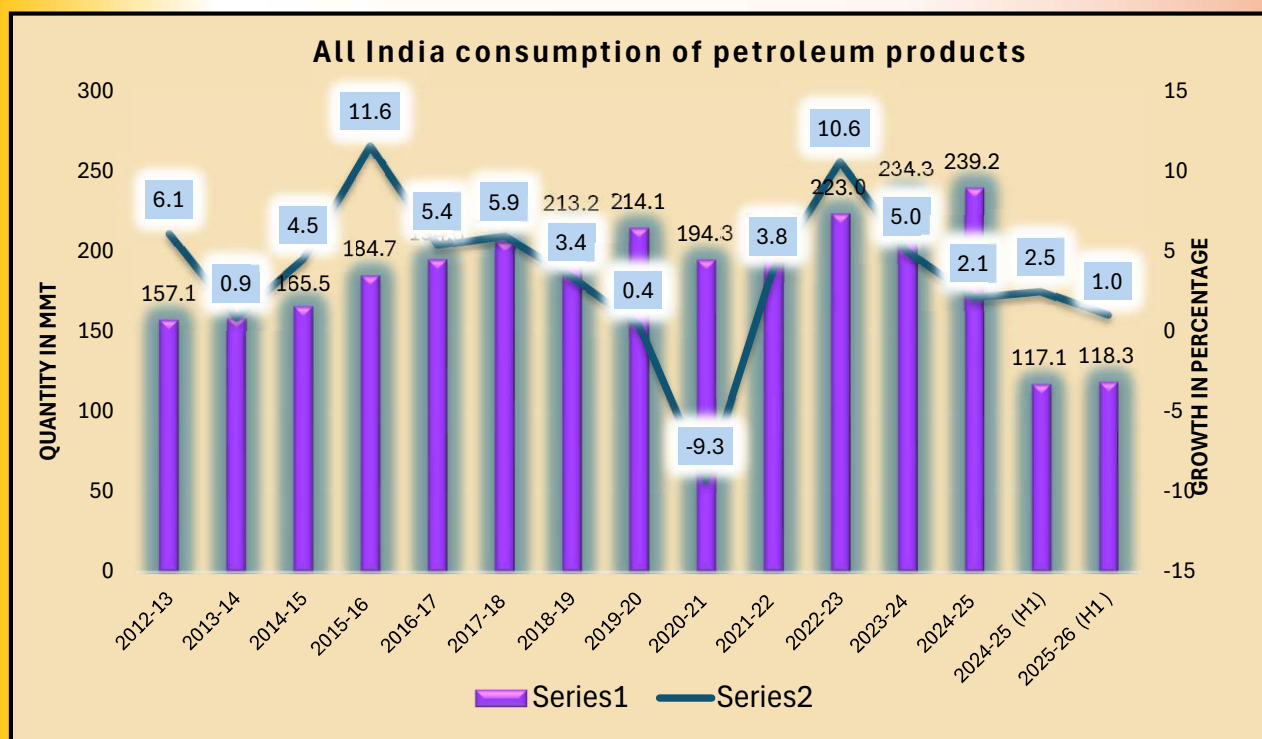

- Overall consumption of POL for H1 FY 2025-26 in the Country was recorded at 118.3 MMT with a modest growth of 1.0% over the corresponding period in FY 2024-25. Growth in the petroleum products is driven by growth in LPG at 7.8, MS at 6.8%, 3.0% growth in HSD while growth in ATF recorded at 0.9%.
 - During the last decade from H1 FY 2015-16 to FY 2025-26, a CAGR of 7.1% was achieved in MS consumption, CAGR of 5.8% in LPG, CAGR of 3.9% in ATF and CAGR of 2.3% in HSD. Rising Private vehicle ownership, increased economic activities and strong push for cleaner fuels for cooking is driving up the demand for MS, HSD, ATF and LPG.
 - The country achieved Ethanol Blending in Petrol of 14.6% during the ESY 2023-24 (Nov'23-Oct'24). Blending percentage has been drastically increased to 19.2% during current ESY 2024-25 (Nov-24 to Sept-25). Highest ever blending % was achieved in the month of Feb-25 at 19.7%. With the current trends, country is on course to achieve 20% blending targets as envisaged in National Biofuel Policy 2018 (As updated).
- The Retail network in the Country at 99,281 RO's as on 30.09.2025 are progressing well to achieve 1 lakh mark. Rural RO's also reached to 28,533 as on the same date.
- Alternate fuels are available at 32,777 Nos. of RO's as on 30.09.2025 and EV charging infrastructure is available at 28,360 RO's thereby partnering well in shift towards electrification of vehicles.
- Direct Sales of HSD recorded at 13% of total HSD sales for H1 FY 2025-26.
 - International aviation contributed to 27% of the total ATF volumes of 4.4 MMT during H1 FY 2025-26.
 - 313 depots and terminals spread throughout the country ensure uninterrupted supply of fuels to consumers.

The consumption of petroleum products has gone up from 88.47 MMT in FY 2015-16 (H1) to 118.3 MMT in FY 2024-25 (H1). The compounded annual growth rate (CAGR) of total POL consumption in the last decade has been 2.9%. The consumption based CAGR was highest in LDO marking 10.2% among POL products in the last decade followed by MS (7.1%), 'Others' at 5.1%, LPG (5.8%), Bitumen (4.6%), ATF (3.9%), Petcoke (1.3%), Lubes (3.3%) and HSD (2.3%). Negative CAGR in the last decade was observed in the consumption of SKO (24.8%), Naphtha (1.2%) and FO/LSHS (0.2%).

• On all India basis the percentage growth in the number of retail outlets from 01.04.2022 to 01.10.2025 has been 20%. The region wise growth is highest for the North Eastern region

(32%), followed by Northern region(20%), Western region (19%), Southern region (19%) and Eastern region (18%).

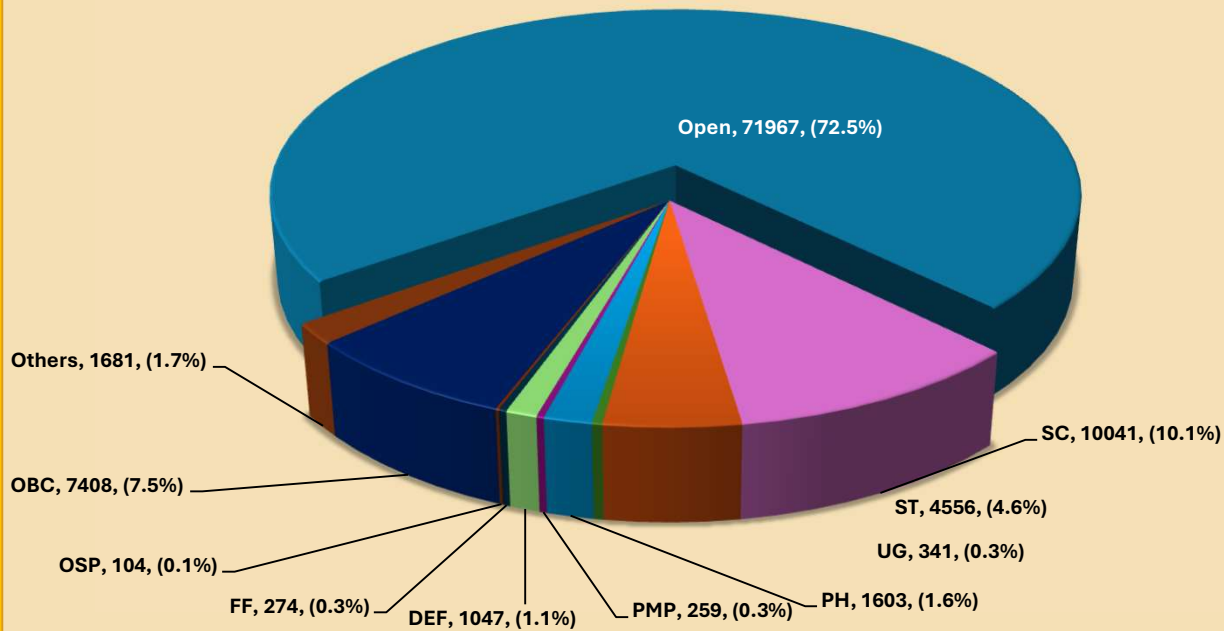

• As many states have become kerosene free in the last five years and due to voluntary surrender of PDS kerosene quota by some others there has been a decline in the number of kerosene dealers in the country.

**EBP %age in all the States has been calculated based on the MS sale in the geographical limit of the respective State. In the States/UTs where receipt is zero but EBP %age has been calculated is due to the fact that sale of Ethanol blended MS which comes from nearby supply locations of other States contribute to the EBP %age in this State/UTs.

Note: With effect from 01.04.2019, EBP Programme has been extended to whole of India except UTs of Andaman & Nicobar Islands and Lakshadweep.

Note:

1. Data in respect of enrolment, customers, distributors, ALDS and rated bottling capacity pertain to PSU OMCs only.
2. Gross tankage includes LPG tankage at LPG bottling plants owned by PSU oil companies, all refineries, fractionators and LPG import terminals.
3. MOPNG vide letter no. P-20019/2/2016-LPG dated 23 June 2016 had issued unified guidelines for selection of LPG distributors. In the said guidelines, LPG distributor categories have been redefined. The historical data on LPG distributors has been rearranged in line with the new classification for comparison.
4. * "The LPG coverage is calculated by PSU OMCs based upon the active LPG domestic connections and the estimated number of households. The number of households has been projected by PSU OMCs based on 2011 census data. Factors like increasing nuclearization of families, migration of individuals/ families due to urbanization and reduction in average size of households etc. impact the growth of number of households. Due to these factors, the estimated no. of households through projection of 2011 census data may slightly differ from the actual no. of households in a State/UT. Further, this methodology does not include PNG (domestic) connections."

Chapter -8

PRICES & TAXES

Chapter Highlights

- ❑ The fiscal year 2025–26 began with relatively low international crude oil prices during the first half of the year, primarily due to the impact of the U.S. President’s aggressive trade and energy policies, coupled with the OPEC+ unwinding of production cuts of 2.2 million barrels per day (bpd) along with ample supplies from non-OPEC producers amid modest global demand. The tightened sanctions on Iran and Russia have had only a limited effect on global supply and trade flows.
- ❑ Dated Brent hovered in the high-\$60s range since the beginning of April, averaging \$68/bbl between 1st April’25 and 29th Oct’25. Crude oil prices witnessed heightened volatility during October 2025 ranging \$68.33/bbl on 08.10.2025 to \$60.6/bbl as on 20.10.2025 (the lowest level after Feb 2021) to optimism surrounding a potential U.S.–China trade deal.
- ❑ The average price of **Dated Brent** during April to September 2025 was \$68.53/bbl as against \$82.60/bbl during April to September 2024 and \$78.91/bbl during FY 2024-25.
- ❑ The average price of **Indian Basket** of crude oil during April to September 2025 was \$68.69/bbl as against \$81.92/bbl during April to September 2024 and \$78.56/bbl during FY 2024-25.
- ❑ Oil & Gas industry is one of the most important contributors to Central & State Exchequers. During the FY 2024-25, Petroleum sector contributed Rs.415,181 crores (Rs.432,394 crores for FY 2023-24) to Central exchequer by way of various Taxes /duties on crude oil & petroleum products. The Contribution of petroleum sector to State exchequer during FY 2024-25 was Rs.325,583 crores (Rs. 318,762 crores for FY 2023-24) by way of VAT and other taxes, royalty, etc.
- ❑ The subsidy burden on petroleum products was Rs.14,810 crores during FY 24-25 (Rs. 12,696 crores during FY 2023-24).

Notes:

1. The Indian basket of crude oil for the year 2025-26 & subsequent period is calculated based on a weightage of 78.71% for the price of sour grades of crude oil (average of Oman & Dubai) and 21.29% sweet grade of crude oil (Brent Dated). The percentages of 78.71 and 21.29 was based on the ratio of low sulphur and high sulphur crude oil processed (indigenous and imported) by all the Indian refineries (PSU and Pvt.).

Table 9.6 : Major end use of petroleum products

Product	Major end use
LPG	Domestic and auto fuel. Also for industrial application where technically essential. Now permittees as auto fuel.
Naphtha	Feedstock/fuel for fertiliser units, feedstock for petrochemical sector and fuel for power plants.
MS	Fuel for passenger cars, taxies, two & three wheelers.
ATF	Fuel for aircrafts.
SKO	Fuel for cooking & lighting.
HSD	Fuel for transport sector (railways/road), agriculture (tractors, pumpsets, threshers, etc.) and captive power generation.
LDO	Fuel for agricultural pumpsets, small industrial units, start up fuel for power generation.
FO/LSHS	Secondary fuel for thermal power plants, fuel/feedstock for fertiliser plants, industrial units.
Bitumen	Surfacing of roads.
Lubes	Lubrication for automotive and industrial applications.
Petrloleum coke	Fuel grade petcoke is used as fuel for cement kilns and electric power plants. Calcined petcoke is used to manufacture energy as well as in the aluminium, graphite electrode, steel, titanium dioxide and other carbon consuming industries.
Other products (Benzene, Toluene, MTO, LABFS, CBFS, Paraffin wax etc.)	Feedstock for value added products.
